Geography

Welcome to the A-level Geography course, you have chosen a subject that helps to answer the world's big questions and helps to ensure answers are found to increase the sustainability of the planet. You will follow the AQA specification. As part of the course you will study a range of human and physical units, fieldwork will unpin learning and set into context key theories.

To help you be successful throughout the course, it is important to be organised. You will need a leaver arch folder (you will need more as you go through the course) and dividers to split topics, post-it notes to highlight key areas and different coloured pens/highlighters to support note taking.

Further information about useful resources will be shared during the start of the course.

To help support your transfer to A-level Geography, please have a go at each task below. You will need these for your first Geography lesson.

I look forward to seeing you in September

Miss Laurence
Head of Geography

Tasks

1. Draw a labelled sketch of the water cycle

2. Define each of the key terms that make up the water cycle

3. Divide each part of the water cycle into the following groups
    a. Inputs – where water enters the system
    b. Transfers – where water is moved
    c. Stores – where water is held
    d. Outputs – where water is lost

4. Using the information you have just put together complete the following question:

    Outline how the water cycle operates as a system (6 marks)
